Laboratory Division

CONVEYOR AND TUNNEL OVENS

- **Purpose built**
- **Temperature range 40 to 250°C**
- **Higher temperature available**
- **Designed for accuracy and repeatability**
- **Full two year warranty**

Genlab manufacture **Conveyor and Tunnel Ovens** that are purpose built to meet high manufacturing and production demands where time and process control is required.

A full design and build facility is available to provide cost effective solutions for customers who need rapid throughput and an automated handling system.

The units are constructed from a powder coated heavy duty tubular frame fitted with painted panels. The interior chamber is made from mild steel coated with aluminum, with stainless steel chambers available as an option.

Throughput systems are designed and built in accordance with each customer's requirement.

Each unit is fitted with a microprocessor digital controller with dual display of set point and actual temperature as standard.

Alternative controllers are available on request.

All units have fan circulation and are heated by sheathed incoloy elements around the fan.

Alternative heating systems are available on request.

Full commissioning and installation services are available.
